This CDS clone is a part of a collection of human full length expression clones generated by BD Biosciences Clontech and the expression clone is a part of a collection of human full length expression clones generated by BD Biosciences Clontech and the Harvard Institute of Proteomics. Each CDS has been cloned in two forms: with and without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Fusion (TM) cloning system between the Sall and HindIII sites of the pDNR-DUAL vector. Additional sequences in the clone: 'ACC' after Sall site and before 'ATG' to provide Kozak consensus sequence; 'GG' after last codon and before HindIII site to maintain reading frame. Clone distribution: http://bioinfo.clontech.com/orfclones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              624

Homo sapiens Tang YT, (first entry) Stache-Crain B, Boyle B;

Identifying a patient with a higher risk of preeclampsia comprises nucleic acid hybridization assay or antibody assay to determine level of a specific nucleic acid (mRNA) or polypeptide.

Claim 1; SEQ ID NO 275; 358pp; English.

The invention relates to a method for identifying a patient with a higher risk of preeclampsia. The method comprises: (a) assaying a sample from the patient to determine the level of a mRNA or other polynucleotide within the sample that hybridizes specifically to a polynucleotide of AED73173-AED74024, and comparing the level to a standard; or (b) contacting a sample from the patient with an antibody that specifically

```
binds to a polypeptide of AED74025-AED74876 to determine the level of polypeptide within the sample, and comparing the level to a standard. Also described: (1) a diagnostic kit, for detecting preeclampsia, comprising: (a) an antibody specific for any of the polypeptides of AED74025-AED74876 or their fragments; or (b) a polymucleotide sequence comprising any of AED73173-AED74024 coupled to a surface; and (c) a standard for any of the polypeptides of AED74025-AED74876 or any of the polypeptides of AED74025-AED74876 or any of the polypeptides of abdrained composition comprising an antibody specific for any of the polypeptides of abdrained sequence or more purified polypeptides of AED74025-AED74876, to ameliorate signs or symptoms of preeclampsia; (2) a pharmaceutical composition comprising or symptoms of preeclampsia; and (3) a method of treating preeclampsia. The composition and method are useful for treating preeclampsia. The composition and method are useful for treating preeclampsia. The present sequence represents a nucleic acid sequence obtained from a human placental cDNA library. Note - The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    t Local Sim.ches 542;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1056 BP; 193 A; 376 C; 292 G; 195 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                      8 Clones (AAT43376-83) contg. interleukin-2 (II-2)-induced genes were isolated from a human IL2 receptor-positive T blast cell cDNA library following II-2 stimulation. 6 Of these ligand-induced genes (CR1, 2, 3, 5, 6, 8) are novel. The CR6 gene encodes a 17.5 kba protein (AAW08138) that may facilitate cellular proliferation by preventing the inhibitory activity of p21. Expression is suppressed by elevated cAMP. CR genes and polypeptides (AAW08133-40) are useful as diagnostic or therapputic agents; CR gene sequences can be used to detect and treat allelic mutations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cytokine response gene; CR6; interleukin-2; IL-2; ligand-stimulated gene expression; diagnosis; therapy; ss

This invention describes a novel isolated antibody or antibody fragment (I) which selectively binds to a polypeptide encoded by cytokine response gene 2 (CR2) and modulates CR2 activity. The products of the invention have cytostatic, anti-allergic, immunosuppressive and antimicrobial activity. The antibodies are useful as therapeutic agents for regulating cellular proliferation and differentiation and for treating all kinds of cancers, immune diseases such as allergic, autoimmune, and rheumatologic diseases, transplant rejection, and as anti-infectives for fighting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CR2; human; antibody; cytokine response gene; cytostatic; anti-allergic; immunosuppressive; antimicrobial; therapy; cell proliferation; treatment; cell differentiation; cancer; immune disease; rheumatologic disease; transplant rejection; anti-infective; CR6; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human CR6 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAA39665;

SYG972 protein is involved in cell differentiation. SYG972 gene is highly expressed in normal differentiated tissues. However, in cancerous tissues, SYG972 gene expression is inhibited. This characteristic of SYG972 gene expression may be used in cancer diagnosis, especially breast cancer. In addition, the SYG972 gene may be used in distinguishing B cells and T cells in determining the origin of cancer in various lymphomas. SYG972 gene and promoter are useful for designing and screening drugs to promote or inhibit apoptosis and differentiation of cells, especially to screen drugs to treat diseases where cell differentiation and apoptosis occur abnormally e.g. cancer, Alzheimer's diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               12-DEC-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δ
cc patient sample containing mRNA, analysing gene expression using the mRNA characteristics in a gene expression signature of the mRNA, and using that results in a gene expression signature to diagnose or analyse the autoimmune disease cor arthritides in the patient, where gene expression of at least 60% of the genes correlates with that of the gene signature. The invention contributer comprises: a treatment of the gene signature. The invention of genes for targeting in the treatment of rheumatoid arthritis; identification of context than a mouse; diagnosis of rheumatoid arthritis in a mammal context of genes chip, specific for rheumatoid arthritis; diagnosis or canalyses of autoimmune disease or rheumatoid arthritis; screening the efficacy of a candidate drug in vitro for the treatment of collagentinduced arthritis; and reducing the symptoms associated with collagentinduced arthritis. The compositions of the invention have the following activities: immunosuppressive, antirheumatic, antiarthritic, osteopathic, antigout, antiinflammatory, dermatological, and immunomodulatory. The methods and compositions of the present invention have the following contended arthritis, lupus, antylosing spondylitis, fibrositis, contended arthritis, gout, juvenile riheumatoid arthritis, and an immune disease caused by an infectious agent. This polynucleotide contended arthritis, and an infectious agent. This polynucleotide contended arthritis and contended arthritis contended arthritis and contended arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Diagnosing and analyzing autoimmune disease using gene expression profiles and microarray technology, useful for diagnosing and treating rheumatoid arthritis, lupus, fibrositis, osteoarthritis, fibromyaigia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Hirsch R,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          autoimmune disease; arthritide; gene expression analysis; rheumatoid arthritis; collagen induced; immunempressive; antirheumaticantiarthritic; osteopathic; antigout; antiinflammatory; dermatological; immunemodulatory; lupus; ankylosing spondylitis; Fibrositis; fibromyalgia; osteoarthritis; gout; juvenile rheumatoid arthritis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel method for modulating pathways leading to programmed cell death, comprising selecting a target within the c-Jun-
CC terminal kinase (JNK) pathway, and interfering with the target using CC an agent that either up regulates or down regulates the JNK pathway. The method of the invention has cytostatic activity. A method of the CC invention is useful for modulating pathways leading to programmed cell CC death induced by TNRalpha, Fas, TRAIL, genotoxic agent such as CC deunorubicin or cisplatinum. Another method of the invention is useful CC for screening and identifying an agent, preferably peptides, peptide CC enimetrics, peptide-like molecules, mutant proteins, CDNAs, antisense CC oligonucleotides or constructs, lipids, carbohydrates or synthetic or natural chemical compounds, that modulate JNK pathway in vitro. A method of the invention may also be useful for treating cancer, and for preventing apoptosis. Compounds that are capable of interfering with the CC ability of Gadd45beta to associate with JNKK2 are useful for treating cand certain types of cancer. The present sequence is used in the

The invention relates to a novel method for diagnosing and analysing autoimmune disease or arthritides. The method comprises obtaining a patient sample containing mRNA, analysing gene expression using the mRNA that results in a gene expression signature of the mRNA, and using that gene expression signature to diagnose or analyse the autoimmune disease or arthritides in the patient, where gene expression of at least 60% of the genes correlates with that of the gene signature. The invention further comprises: a treatment of rheumatoid arthritis; identification of genes for targeting in the treatment of rheumatoid arthritis in a mammal other than a mouse; diagnosis of rheumatoid arthritis; diagnosis or analyses of autoimmune disease or rheumatoid arthritis; diagnosis or analyses of acondidate drug in vitro for the treatment of collagen-induced arthritis; and reducing the symptoms associated with collagen-induced arthritis. The compositions of the invention have the following activities: immunosuppressive, antirheumatoi, antiarthritic, osteopathic, antigout, antiinflammatory, dermatological, and immunomodulatory. The methods and compositions of the present invention are useful for diagnosing and treating autoimmune disease or arthritis, and an immune disease caused as an infectious agent whis nolvinitis, and an immune disease caused as an infectious agent whis nolvinitatis, and an immune disease caused as an infectious agent whis nolvinitatis, and an immune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       autoimmune disease; arthritide; gene expression analysis; rheumatoid arthritis; collagen-induced; immunosuppressive; antirheumatic; antiarthritic; osteopathic; antigout; antiinflammatory; dermatological; immunomodulatory; lupus; ankylosing spondylitis; Fibrositis; fibromyalgia; osteoarthritis; gout; juvenile rheumatoid arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ADP65003 standard; DNA; 1078 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Diagnosing and analyzing autoimmune disease using gene expression profiles and microarray technology, useful for diagnosing and treating rheumatoid arthritis, lupus, fibrositis, osteoarthritis, fibromyalgia

The present invention describes a method of testing for bronchial asthma or chronic obstructive pulmonary disease. The method comprises determining the expression level of a marker gene in a biological sample from a subject, comparing the expression level determined with the expression level of the marker gene in a biological sample from a healthy subject, and judging whether the subject has bronchial asthma or chronic obstructive pulmonary disease. The marker gene comprises: (a) a group of genes (S1) whose expression levels increase when respiratory epithelial cells are stimulated with interleukin-13; or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial cells are stimulated with interleukin-13; or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial cells are stimulated with interleukin-13; or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial cells are stimulated with interleukin-13; or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial cells are stimulated with interleukin-13; or (b) a group of genes (S2) a morthial asthma or chronic obstructive pulmonary disease; (3) an animal model for bronchial asthma or chronic obstructive pulmonary disease; (5) a method for producing an animal model for bronchial asthma or chronic obstructive pulmonary disease; (5) a marker gene or an antisense nucleic acid corresponding to a portion of the marker gene or an antisense nucleic acid corresponding to a portion of the gene through an RNAi effect or an antibody recognising a probe has been immobilised to assay a marker gene. (I) has respiratory and antisathma or a chronic obstructive pulmonary disease, on which a probe has been immobilised to assay a marker gene. (I) has respiratory and antisathma or chronic obstructive pulmonary disease. The method is useful for testing for or screening for a therapeutic agent for bronchial asthma or chronic obstructive pulmonary disease. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Testing for bronchial asthma or chronic obstructive pulmonary disease comparing the expression level of a marker gene in a biological sample from a subject with the expression level of the gene in a sample from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ohtani N,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                     The invention relates to a method of classifying a breast cancer patient according to prognosis by determining the similarity between the level of expression of each of five genes for which markers are listed in the specification, in a cell sample taken from the breast cancer patient, to control levels of expression for each respective five genes to obtain a patient similarity value. The methods are useful for classifying a breast cancer patient according to prognosis. Kits and computer program products are useful for data analysis using the diagnostic, prognostic and statistical methods of the invention. This sequence corresponds to a marker used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                Classifying a breast cancer patient according to prognosis determining the similarity between the level of expression five genes in a cell sample taken from patient, to control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Breast cancer prognosis marker #1310.

The method involves selecting a target within the c-Jun-N-terminal kinase (JNK) pathway and interfering the target by an agent that either upregulates or downregulates the JNK pathway. The JNK modulator is effective in treating degenerative disease and cancer. The method and compositions of the invention are useful in immunotherapy, cancer chemotherapy and in gene therapy. The present sequence is the human gadd45 DNA which is a modulator of JNK pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Method for modulating pathways leading to programmed cell death for treating cancer, by obtaining peptide having specific amino acid sequent and regulating JNK pathway using peptide or composition developed using peptide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1078 BP;

cDNA clone GEN-554H06, which includes a separately claimed coding region (see AAT74047), corresponds to a novel gene, designated as human GRP17 (Gadd45 and MyD118 related protein, 17 kDa), that is associated with arrest of cell growth and DNA damage induction. It encodes a protein (see AAW23533) that is highly homologous to proteins encoded by gadd45 and MyD118 genes, both of which are tumour suppressors. The gene maps to chromosome 9922.1-22.2 GEN-55H06 was isolated from a human placental cDNA library on the basis of homology with gadd45 and MyD118. It is thought that the gene, when it is abnormal, may possibly induce cancer or malformation, and that it may be applied clinically in the diagnosis and/or treatment of cancer, malformation and autoimmune diseases, as well as for screening drugs for treatment of these conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                               ery Match

The invention relates to a composition comprising a plurality of cDNAs for detecting the altered expression of genes in an immunological response. The invention also relates to a method of diagnosing or monitoring the treatment of an immunopathological condition in a sample, comprising obtaining nucleic acids from a sample, contacting the nucleic acids of the sample with an array comprising the plurality of cDNAs under conditions to form one or more hybridisation complexes, detecting the hybridisation complexes and comparing the levels of the detected
                                                                                                                                                                                                                                                                                                                                                 A composition comprising a plurality of cDNAs, useful for detecting altered expression of genes in an immunological response or for diagnosing and treating an immunopathology, e.g. Crohn's disease, asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cocks

hybridisation complexes with the level of hybridisation complexes detected in a non-diseased sample, where an altered level of the detected hybridisation complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and a method for identifying a plurality of polynucleotide probes. The cDNAs are useful as hybridisable array elements in a microarray for monitoring the expression of target polynucleotides. The microarray for monitoring the expression of immunopathology, such as Crohn's disease, asthma, ulcerative colitis, hypereosinophilia, irritable bowel syndrome, osteoarthritis, rheumatoid arthritis or acute monocytic leukaemia, and in identifying agents for the treatment of the diseases. The microarray may also be used in drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. The composition may also be used in purification of a subpopulation of mRNAs, cDNAs or genomic fragments. This sequence represents a human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at segdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 750 BP; 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to polynucleotides which are used as probes to detect genes differentially expressed in an immunological response, abundantly expressed in an immunological response and/or coding for a polypeptide known to regulate blood cell biology. The polynucleotides are useful in research and diagnostic applications particularly in cancer and immunopathological conditions, such as AIDS, allergies, anaemia, asthma, atherosclerosis, bronchitis, ulcerative colitis, diabetes, multiple sclerosis, osteoporosis, pancreatitis, infections and arthritis. The present sequence represents a human lymph node cDNA used to detect blood cell and immunological response gene expression. Note: The present sequence does not appear in the printed specification but was obtained in electronic format from the USPTO web site (seqdata.uspto.gov/sequence.html?DocID=20040077003).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New compositions having a number of first, second and third polynucleotide probes, useful in research and diagnostic applications cancer and immunological conditions e.g. AIDS, diabetes, osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ss; gene; human; immunological response; blood cell; cancer; immunopathological; AIDS; allergy; anaemia; asthma; atherosclerosis; bronchitis; ulcerative colitis; diabetes; multiple sclerosis; osteoporosis; pancreatitis; infection; arthritis; lymph node.

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples and comparing the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human soft tissue sarcoma-upregulated DNA -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ADQ20819;

Example 2; SEQ ID NO 7602; 210pp; English.

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples and comparing the expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cyrostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
